CHANGES to Week #14 Handout, 2009.12.01
Astronomy 101, Professor Douglas Leonard

The final, complete Weekly Handout for this week is available for download at the course website: (http://sciences.sdsu.edu/~leonard/astro101). For convenience, I have listed here only the changes (i.e., additions, deletions, or changes) that were made to the version of the handout contained in your Course Reader. Rather than printing out the entire handout, you may wish to simply write these changes in to the Reader version of this Weekly Assignment.

Changes to the Week #14 Handout that is printed in the Course Reader

Just two new Announcements were added in, and they both relate to the fact that I am out of town for much of this week:

- **Guest lecturer this week!** As mentioned in last week’s handout, this week’s class lectures will be delivered by Mr. Alex Burke. You are probably familiar with Alex already, since he is one of our Teaching Associates this semester. I think you will find his lectures to be extremely interesting, as they will cover a fascinating and important topic in astronomy: Galaxies. Alex will be covering exactly the same slides from the Course Reader that I would have covered, had I been here to deliver the lectures myself, so pay close attention!

- **Office hours changed on Friday, December 4.** This week, my Friday office hours will be held from 4:00 PM - 5:00 PM (instead of the usual 12:00 - 2:00 PM).
